DETAILED ACTION***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/1/03 has been entered.

Response to Arguments

2. Applicant's arguments filed 4/1/03 have been fully considered but they are not persuasive. Applicant has amended the preambles of independent claims 1 and 28 to now include "related to at least one news source"; however, there is no nexus between the preambles and the bodies of these independent claims. Consequently, this new limitation in the preamble of these claims does not "give life, meaning, and vitality" to the claims. See MPEP 2111.02.

3. The Examiner believes that the news statistics of both **Reilly et al.** and **Herz et al.** include both *subjects* of news articles and *source(s)* of news articles. The terms *subjects* and *sources* are broadly but reasonably interpreted. MPEP 2111. See at least Figs. 4-6 and 8 of **Reilly et al.** for news categories, news subcategories, news headlines, and of course, various time-stamped news stories. See at least Figs. 5 and 10 of **Herz et al.** for "document activity" and the "monitor[ing of] which articles are read".

Art Unit: 2857

With respect to "news source[s]", see at least Figure 1 of **Reilly et al.** which clearly shows: "AP News Feed, DOW News Feed, Sports Ticker ...", which are of course, news sources being fed to the Newswire Interface 120.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Reilly et al.** ('549) in view of **Herz et al.** ('939).

6. Fig 1 of **Reilly et al.** and Fig. 10 of **Herz et al.** are reproduced below.

7. **Reilly et al.** disclose an information and advertising distribution system and method. **Reilly et al.** substantially disclose the instant claimed method and apparatus. More particularly, they disclose in col. 9 that their "display statistics generator 210 keeps track of how many times each news item has been displayed in the same time period. These display statistics are stored in the user profile 194 at 218...news items display statistics are transferred to the information server once per day during a connection..."

Art Unit: 2857

8. The difference between the instant claimed invention and that of **Reilly et al.** lies in the “signaling when the comparison yields a difference greater than a predetermined amount”.

9. **Herz et al.** disclose a system for generation of user profiles for a system for customized electronic identification of desirable objects. They particularly teach that information related to an online user's particular interests and activities is of very special interest to marketers and advertisers. Demographic analysis and market research of user profiles can be used to match target objects to users more readily. Newspaper stories are merely one element of a user's particular profile. See at least cols. 5-7 of **Herz et al.** How often a particular subject or article of a particular newspaper or novel is read is a good indicator of its popularity. According to **Herz et al.** each user's profile interest summary is “automatically updated on a continuing basis to reflect the user's changing interests” (col. 6). Such updating is associated by the Examiner with the claimed “signaling”. See at least Fig. 10 of **Herz et al.**

10. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the “automatic updates to reflect the user's changing interests” as taught by **Herz et al.** into the information distribution system of **Reilly et al.** because such a system provides almost instantaneous market research data that can be exploited to match numerous products and services to a particular user's measurable interests.

11. With respect to dependent claims 2-27, the Applicant is urged to closely review at least Figs. 1, 4 and 5 of **Reilly et al.** which clearly show the various claimed client/server relationships, the various databases/news sources, and the various statistics and timestamps.
